Re-Mulch™

Mulch Benefits

Mulch provides a wide array of benefits; it retains moisture for plants, deters weed growth, and our environmentally friendly Re-Mulching™ process makes our Re-Mulch™ biodegradable which ensures nutrients return back to the ground when it biodegrades.

Why Re-Mulch™?

Our facility recycles up to 80% of the material we collect. We are focused on turning the highly recyclable materials that we process into value products that can be reused.

Re-Mulch™ is one way we accomplish this sustainability goal.

Our Re-Mulch™ is made from materials that have been brought into our facility for recycling. We separate the wood brought in to help create Re-Mulch™ from the original materials recycled.

All of our mulch products are from recycled products and are produced on site in eastern North Carolina.

Mulch Options

Re-Mulch™ is available in red and brown colors for landscaping.

For your convenience, delivery is available for orders of 80 yards or more. Pickup is also available

Our Mission

Green Recycling Solutions is a steward of our environment and community. We recycle construction and demolition materials and provide Re-Mulch™ products for our customers.

By recycling, we make a better tomorrow today.
